

US Supreme Court Grants Government the power to regulate Green House Gas Emissions

Federal and Local regulation expected

Dear <Salutation> <Last>,

In April of 2007 the **US Supreme Court granted government the right to regulate Green House Gas Emissions** in a landmark decision. California, Connecticut and New Mexico have enacted tougher regulations for (GHG) emissions and water discharge standards. Complying with new rules, as well as providing for state and federal reporting requirements calls for effective tools to capture, store and report pertinent information.

Violations occur when regulations change, and the requisite changes to compliance process lag. Manual reporting that does not reflect current requirements resulting in SEC reporting deficiencies. For this reason I am writing you and <<Exec1>>, <<Exec2>>, <<Exec3>>, and <<Exec4>> as the officers most responsible for environmental stewardship.

Current **spreadsheet solutions** are ill-suited for coping with the dynamic changes, multiple requirements, and geometric growth in complexity of environmental reporting requirements.

[OpsEnvironmental](#) is the most cost effective system for reducing the immense effort required to comply with and adapt to growing environmental compliance risks.

The system provides:

- **Automated capture: of the detailed information cutting up to 75% of the time required to prepare annual air emissions submittals**
- **Reporting: flexibility with robust tools for, proactive emissions and discharge process compliance**
- **Audit Trails: that enable staff to verify data online and discover anomalies**
- **Security : the software ensures that only authorized changes are made to company processes and controls for reliable audit compliance**

Please allow us a 30-minute conference call where one of our officers can explain our methods and share our ideas and experience. In the meantime please feel free to download the case studies documenting real world application of our revolutionary tool for environmental compliance management by clicking on any of the logos below.

Sincerely

Tara Tenney
